AWS for VMware:

Migration and Modernization Pathways

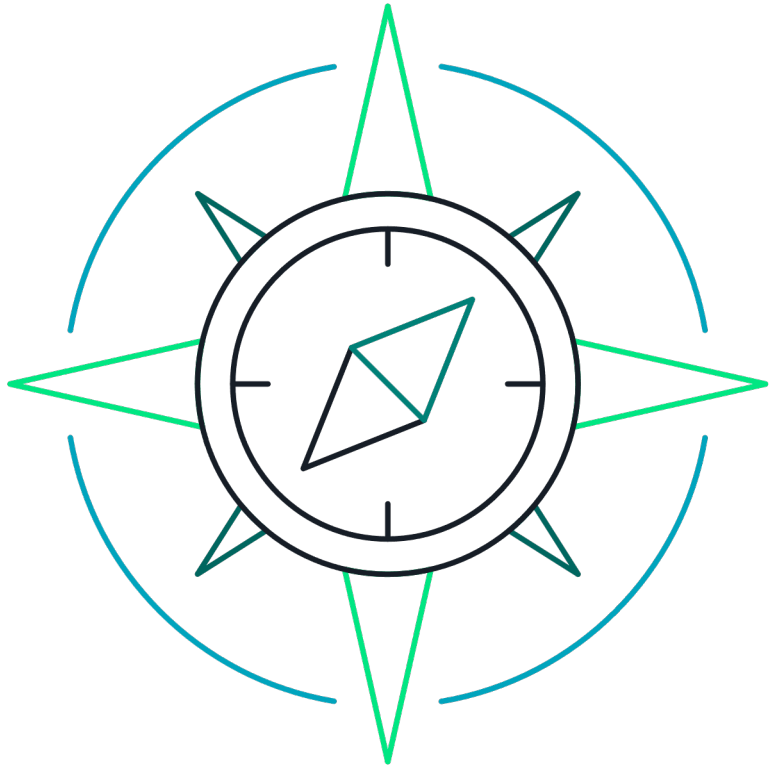

Learn how to start your VMware transformation journey on AWS

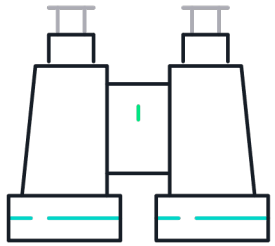

Exploring the future of your VMware-based workloads requires a strategic approach backed by tailored solutions and the right tools.

AWS meets you where you are and helps you get to where you want to be in your cloud journey.
By offering the most comprehensive migration and modernization pathways, AWS can help you navigate change confidently and meet your transformation needs.

Start your transformation ›

Determine your overall modernization strategy

Migrate and optimize workloads

Meet upcoming deadlines, rapidly migrate to AWS, and transform at your own pace later

Transform workloads

Align your cloud adoption journey with your business transformation goals and maximize cloud benefits

Map the AWS pathways for your VMware workloads

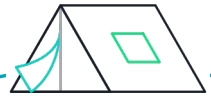

Start your cloud migration journey from any point that suits your workload requirements

Rapid migration

Relocate

Seamlessly migrate and operate VMware Cloud Foundation (VCF) on AWS with **Amazon Elastic VMware Service (Preview)**

Rehost

Lift and shift applications from any source environment to **Amazon EC2** with minimal changes your workloads

Replatform Containers

Move from self-managed container platforms on VMware to AWS container services such **Amazon ECS** or **Amazon EKS**

Replatform to Managed Services

Move and optimize your workloads leveraging AWS managed services such as **Amazon RDS**, **Amazon FSx**, and **Amazon Workspaces**

Rearchitect

Transform applications to the cloud and modify their architecture by taking full advantage of cloud-native features such **AWS Lambda**

Complete transformation

If you have data residency needs,

Keep sensitive data and applications within your own data centers by deploying AWS infrastructure and services on-premises using **AWS Outposts**

Looking for alternative paths?

Customers can also consider AWS Partner offerings available on AWS Marketplace, for example

- **Nutanix Cloud Clusters on AWS (NC2 on AWS)** enables customers to run a self-managed hypervisor on top of AWS infrastructure
- **Red Hat OpenShift Service (ROSA)** offers customers a fully-managed application platform on AWS infrastructure based Red Hat solutions

Preview

Amazon Elastic VMware Service (EVS)

The fastest path to migrate and operate VMware workloads on AWS

Accelerate migration with subscription portability and automated deployment

Control how you build and optimize VCF environments

Choose to self-manage or leverage AWS Partners for managed experience

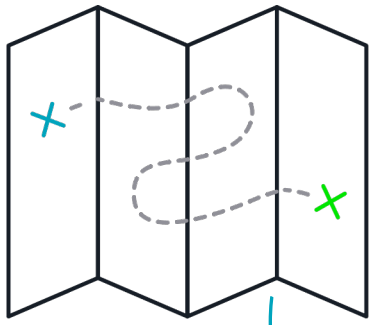

Build scalable, secure, and resilient infrastructure on AWS

Drive modernization with 200+ AWS services

Complete a complimentary assessment

Assess your VMware environments with an **OLA** to choose your cloud strategy based on business priorities

Optimization and Licensing Assessment (OLA)

OLA provides recommendations to help reduce costs on compute, storage, and licensing, providing cost savings even before you migrate.

Accelerate outcomes & optimize costs with programs and incentives

Migration Acceleration Program (MAP)

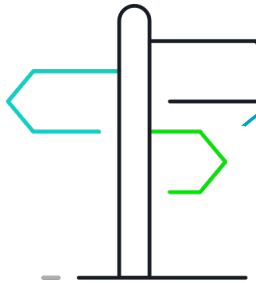

MAP provides services, migration know-how, and tools to help you accelerate migrations to AWS while reducing the long-term cost of ownership.

Take advantage of funding incentives and programs such as **Migration Acceleration Program**

We'll help you find the best programs and incentives for your strategy based on applications, architectures, timelines, goals, and skill sets.

Leverage purpose-built tools to simplify your cloud journey

Get guidance throughout your migration and modernization journey with **AWS Migration Hub**

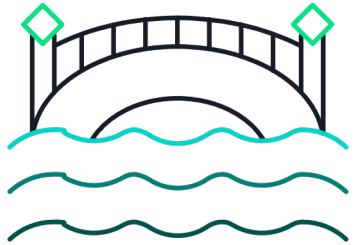

AWS Migration Hub

AWS Migration Hub delivers a guided migration and modernization journey through discovery, assessment, planning, and execution, including prescriptive step-by-step journeys built for VMware migrations.

AWS Application Migration Service (MGN)

Looking to rehost your workloads on Amazon EC2? MGN is a highly automated solution that simplifies, expedites, and reduces the cost of migrating virtual machines to AWS.

Accelerate your lift-and-shift with **AWS MGN**

Why transform VMware-based workloads with AWS?

Organizations that migrate from on-premises to AWS experience:

227%

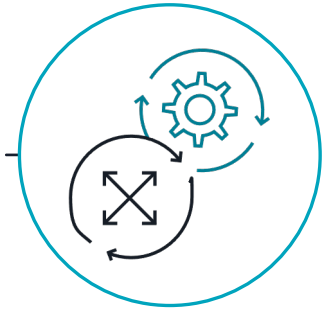

greater service availability hours than the next cloud provider[1]

UP TO

66%

infrastructure cost savings[2]

60%

in time savings through task automation[2]

43%

lower time to market for new features[2]

Sources:

[1] Public Status Pages for Cloud Providers. AWS has 1,434 service disruption hours published versus the next provider at 5,414 hours. Two other cloud providers follow at 28,384 hours and 92,002 hours.
